## PHD THESIS

- **Title:** Belief is Messy.
- **Committee:** Roger White (chair), Kevin Dorst, Jack Spencer and Bob Stalnaker.
- **Abstract.** My thesis investigates belief in three central areas, arguing in each case that belief is far messier than hitherto appreciated. Chapters 1 and 2 argue that there are fewer constraints on when and how justified beliefs should be revised than usually supposed. In particular, I argue against the plausible principle ‘Anticipation’, which states that if both learning  $p$  and *not*- $p$  would render belief in  $q$  unjustified, one cannot now be justified in believing  $q$ . I defend a new theory of belief revision that can embrace this fact, predicated on the simple idea that one is justified in ruling out possibility just in case that possibility is sufficiently improbable. Chapter 3 considers beliefs formed by induction, arguing they can constitute knowledge only if they display striking egocentric asymmetries. For example, an agent can know an urn contains only green marbles if *their* random sample is all green, without being able to know that an urn contains only green marbles if *someone else’s* random sample is all green. This raises a challenge: can any plausible theory of justified belief accommodate such bizarre asymmetries? I show how the theory defended in Chapters 1 and 2 can. Finally, Chapter 4 — now forthcoming in *Analysis* — considers the increasingly popular ‘weak belief’ thesis that belief is rationally compatible with low confidence. I outline a puzzle concerning beliefs in conditionals demonstrating that the relationship between belief ascriptions and rational belief cannot be as straightforward as proponents of weak belief assume.

## TEACHING

### Instructor - Graduate

- Belief and its Limits, ANU, Fall 2025.

### Instructor - Undergraduate

- Being, Thinking, Doing (or Not): Ethics in Your Life, co-taught with Nicholas Collura, MIT, Spring 2025.
- Theory of Knowledge, co-taught with Roger White, MIT Fall 2024.

### Qualifications

- Kaufman Teaching Certificate Program, MIT, Spring 2025

### Guest Lectures

- 'Credence, Belief Revision and the Gambler's Fallacy' (own research), Foundations of Probability, MIT, Spring 2023.
